

CABRINHA 04

Not all things are created equally, and neither should they be. We all have different requirements, different points of focus, different needs. For some, they just want to get out there and enjoy mother nature's finest, for others they are looking for that little bit extra to help them push their boundaries or that of the sport.

As our sports continue to grow and develop, we are seeing that products have to evolve to meet the new demands. In the 03 season we introduced the Apex series. A range of products that push the boundaries of material and product design. This year sees the next step of this evolution with the introduction of the Moto Apex and Moto Apex XL. The XL is a kite that is designed to not only perform in threshold winds, but also excel and maintain the Moto DNA of being an incredible kite to fly.

No matter what product you use, what conditions you ride in, the one thing that brings us all together is the community of like-minded people who all share the same passion and stoke. They are there for our new tricks, there for our best sessions (and our worst), but most of all they are the ones that help make each session special, and give us the smiles that we carry through the evenings and into the next days.

KITE OVERVIEW

Whether you are looking for that little bit extra to take you to new heights, or ride in lighter winds. If you are looking for that go to, trustworthy kite that you know will get you deep into the pocket of the wave, the Cabrinha 04 Collection has something to satisfy all needs.

We are seeing the next big evolutionary jump in kite designs happening right now in materials and construction techniques, so there is no time better than the present to upgrade not only your quiver, but your experience on the water.

TECHNOLOGY

NANO RIPSTOP CANOPY

NANO RIPSTOP CANOPY

A higher level of performance can only be canopy achieved when the kite's design properties are supported by a stable and reactive kite material. Nano Ripstop does just that.

HTD LITE

The next evolutionary jump in inflatable structures is HTD Lite. We took the superior benefits of the proven HTD material with its superior elongation control and combined it with a superior reflex bias recovery and lighter weight construction to elevate the response characteristics and range of the kite.

Developed exclusively for kite leading edges, this is a strong, stable, and exceptionally responsive material. Ultra HT reduces the weight of the leading edge and struts while boasting incredibly low elongation and response. A unique and proprietary coating process increases durability and performance unlike anything you have felt

HYBRID FRAME

The perfect fusion of materials. A combination of High Tenacity Dacron (HTD) & HTD Lite blends. the Hybrid Frame offers support to the kite with increased response.

LITE FRAME

This frame has the benefits of the proven HTD Lite Dacron along with a refined canopy design to provide the lightest most reactive kites to date. This light-weight frame increases the range and performance of your product.

APEX FRAME

Our highest performance design utilizing the brand new Ultra HT material. We've reduced the overall weight while providing an incredible increase in low elongation and response. A unique proprietary coating process increases durability and performance unlike anything you have felt before.

APEX BRIDLES

No compromise, Low profile, low elongation SK99 bridles only utilized on the Apex kites further extend the performance of the kites, allowing Pat Goodman to refine and tune the kites to exactly what he wants.

PURE PROFILE PANELS The strategically placed panels pro-

The strategically placed panels provide ultimate control over the aero- dynamic profiles in the kite. Smooth and stable profile entry. Improved overall kite efficiency, performance, and range. Faster flying through the sky giving you a broader range of performance.

BIDIRECTIONAL PURE PROFILE PANELS

Taking the next evolutionary jump into design and manufacturing accuracy, the Bidirectional PPP also allows for full profile accuracy throughout the chord length of the kite and it's panels. This results in an increase in performance and efficiency.

1X SECURITY

Upon activation of 1X's single line flagging system the power of a kite is immediately killed and it will rest motionless on the water or land.

With 15% increased airflow and a toolless interchange system, Sprint 3.0 is the most efficient way to get your kite inflated and deflated guickly, providing more time on the water. The streamlined new design reduces the chances for snagging or hose kinks when setting up and packing down. The new pinch clamp gives a one click positive lock to keep air in the places you need it to be, and to release when required.

DYNAMIC ARC

Dynamic arc allows the kite to have two distinct arc shapes. The arc of the kite takes on one shape while flying, and another shape while in resting mode on the water. While resting on the water the arc opens up slightly to facilitate an easier relaunch.

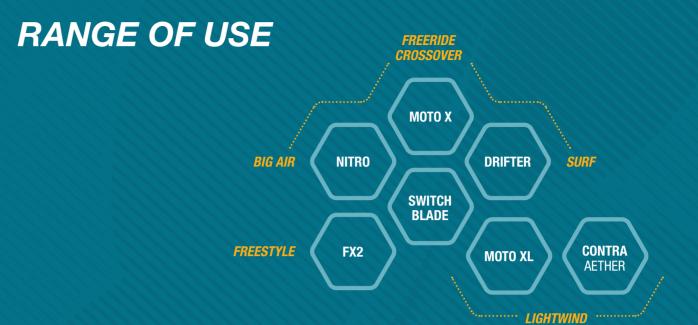

POWER CONTROL

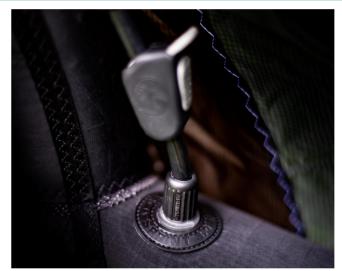

Every Cabrinha kite comes with a simple, user adjustable way to choose the power level of the kite. Each rear line "pig tail" connector has three power positions you can connect to. The middle position is the brand recommended position. However, the user can choose to create more power by connecting the knot closest to the kite, or less power by connecting to the knot closest to the rider.

SLACKLINE DRIFT (DRIFTER)

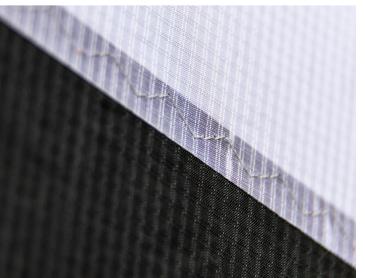

The ability to park itself and stay aloft longer when the lines go slack so you can focus entirely on riding **KITES CABRINHA**

SWITCHBLADE

PERFORMANCE FREERIDE

5/6/7/8/9/10/11/12/14

The longest running and most successful kite in the industry is back for it's 17th year, and what a year it is.

The kite that spawned not only a style of riding but also a whole generation of kiters has evolved into the highest performing Switchblade to date.

Taking the known Switchblade DNA, the creatives in the Design Works team have evolved this 5 strut design through use of new technologies, construction techniques and internal adjustments, to give a more playful, lighter feeling kite, while still remaining predictable and stable.

This Lite Series kite utilizes the HTD Lite materials which make this the lightest Switchblade to date. Combined with the Integrated Structural Canopy (ISC) we have been able to greatly reduce the weight of the kite while increasing longevity and improving steering speed.

DESIGN PROFILE

5 Strut / Hybrid design / Fusion wing tip shape / Draft forward profile / Hybrid strut

FEATURES

- NEW HTD Lite Lightweight ultra-rigid Dacron
- NEW Switchblade DNA, cutting edge handling and performance
- **NEW** Revised aerodynamic profiles and design
- NEW Lighter and more playful control response
- **NEW** Bi-directional pure profile panels
- Low elongation bridle for improved reactive feel
- Ultralite bladders for an overall lighter weight kite
- Trailing edge EVA rigidity battens
- Nano Ripstop Canopy: durability, stability and responsiveness
- Sprint 3.0
- Durable TPU leading edge bumpers

SURF / FREESTYLE SURF

5/6/7/8/9/10/11/12

Often imitated, but never equaled, the Drifter remains the go to kite for anything to do with waves and directional boards.

As the name suggests, the kite is synonymous with its drift ability. Put it in position and ride down the line, the kite gives you the confidence to concentrate on the wave ahead instead of having to fly the kite.

But the Drifter offers much more than that. The first production kite to be triple looped, the Drifter is also at home in the air.

This Lite Series kite is the most reactive Drifter kite to date, allowing you to put the kite where you want it in the air, no matter what style of riding you are doing.

Whether you are taking to the skies for Strapless Big Air, charging down the line on a screaming point break or ripping wind swell, the Drifter will always deliver.

Who is the best rider at your local spot? The one having the most fun.

The Moto X is your ticket to good times. Whether you ride a twin tip or a surfboard, this kite will help take your kiting to the next level and allow you to have the most fun on the journey.

This Lite Series product gives you the added response and performance created through the utilization of the HTD Lite airframe. Tie this in with features such as ISC and Bidirectional Pure Profile Panels, and you have a high performance, yet easy to use product.

Apex (noun): The highest point or most successful part of something.

What can you do to an already incredible kite. You give it the Apex treatment. With a lighter feel and even more playful handling, the Moto X Apex is a true to testament to the Apex Series of kites.

The use of Ultra HT for the main airframe aids in stability, steering and also recovery due to the incredible bias elongation controls. Combine this with the use of the Aero spliced bridle line, and new lighter weight bladders, you have the lightest 3 strut kite in the Cabrinha range to date.

DESIGN PROFILE

3 Strut / Moderate aspect ratio hybrid design / Reactive wing tip / Fast, lean and efficient profiles

FEATURES

- NEW Ultra HT Strong, stable, and responsive material, exclusive to the Apex series
- **NEW** Apex Bridle thinner and lower elongation bridle for optimal efficiency and reactive steering
- **NEW** Feather lite bladders
- NEW Ultra-Reactive steering response
- **NEW** Bi-directional pure profile panels

VERSATILE LIGHTWIND / FREERIDE

13 / 15 / 17

Threshold winds have always been the toughest challenge to any kite designer. Do you make a powerful kite, but sacrifice turning and playfulness, or do you make a light kite, but sacrifice the low end power that gets you up and going.

Building off the highly successful Moto X platform with the combination of the materials used in the Apex Series, Pat Goodman was able to skillfully handcraft the perfect blend between power and fun.

The lightweight Ultra HT and the new Featherlite bladders bring down the weight, but also aid in the fun lively feel of the kite.

The MotoXL Apex is the kite you need in your quiver. The ultimate session saver, it will have you coming off the water with that look on your face which makes everyone know just how much fun you had.

DESIGN PROFILE

3 Strut / Moderate aspect ratio hybrid design / Reactive wing tip / Fast, lean and efficient profiles

FEATURES

- **NEW** Ultra HT strong, stable, and responsive material, exclusive to the Apex series
- **NEW** Apex Bridle thinner and lower elongation bridle for optimal efficiency and reactive steering

NITRO APEX

PERFORMANCE BIG AIR

6/7/8/9/10/12

Last year we introduced the big air evolution of the Nitro to the kite market, and it delivered.

One of the most anticipated kites, grasped the kite world by the horns and took riders to all new heights.

For 04 the Nitro is back again and through the work of the Cabrinha International Big Air team and the crew at Design Works, we have taken yet again another evolutionary jump forwards.

Refined profiles to help maintain canopy support during extreme tricks and the new 7 point Apex Bridle gives the riders the support and confidence they need to not only do the tricks, but to also provide them with the feedback they need through the bar during the tricks.

The ultimate wingman, the new Nitro will not only help you go to the next level but will also be there with you for the ride of your life.

DESIGN PROFILE

5 Strut / High sweep / High aspect / Hybrid strut

FEATURES

- NEW Feather Lite bladders
- NEW Increased top end range, stability and hang time
- NEW Apex Bridle Thinner and lower
- elongation bridle for optimal efficiency and reactive steering • NEW Optimized airfoil for increased lift and stability during
- increased angles of attack. • NEW High support bridle attachments for increased
- stability and wind range.
- NEW Bi-directional Pure Profile Panels
- Ultra HT strong, stable, and responsive material, exclusive to the Apex series
- Sprint 3.0

FX2

FREESTYLE CROSSOVER

7/8/9/11/13

Air and style are two words synonymous within the board sport industry. Most people develop their skills to achieve one or both of these terms, but to really master them both, you need a product that will allow you to get there.

A true crossover kite, the FX2 gives riders the tools to take to the sky in the Big Air realm delivering fast powerful loops with amazing catch ability, but with a change of bridle, they then have a no compromise freestyle machine that will allow you to push your limits and the boundaries of what you thought possible.

The new Hybrid Frame and HTD Lite materials have further increased the range of the FX2 to allow for an increased low end range, and also maneuverability in the higher winds and during double loops.

DESIGN PROFILE

3 Strut / Modified C shape arc / Swept wing tip / Moderate aspect ratio design / Freestyle profile / 3 bridle setting options and 6-line setup

FEATURES

- Lightweight canopy design for reduced weight and reactive performance
- Sprint 3.0
- Ultralite bladders for an overall lighter weight kite

CONTRA AETHER

PERFORMANCE LIGHTWIND / FREERIDE

5/7/9/11

There is something truly liberating and free when riding a Hydrofoil. This is further heightened when you are able to ride in winds that were not previously thought possible. Conditions where the water is still, and the only noise is the apparent wind in your ears as you glide across the ocean.

The Contra Aether has proven its self as a bench mark in the single strut kite realm. A kite that not only allows you explore these threshold winds, but also keeps you in control when the winds pick up, or you change your choice of board.

The single strut design and the use of the Hybrid Frame and HTD Lite materials, gives you an incredibly nimble and light kite to fly, allowing you to use much smaller sizes of product to maximize foil boardings true potential. Feather weight control and amazing drift characteristics allow you focus on your riding and not the kite.

DESIGN PROFILE

1 Strut / Hybrid design / Low-drag wing tips / Draft forward profiles

CONTROL SYSTEMOVERVIEW

The most critical piece of equipment in kiteboarding is the control system. A system that you not only rely on for your safety and well being, it's also the direct link between you and the elements.

A lot of work goes into kite design. The Design Works team spends countless hours tuning and modifying the way a kite feels in order to make it the highest performing product on the market. In order to get the most out of all the work, you need a control system that gives you a direct connection to the kite. This connection needs to be intuitive and seamless in use, allowing you to focus on having the most fun in the elements. Introducing the **C.O.S.**

C.O.S. RELEASE

The push-click Quick Release is the foundation of the C.O.S. Matched with the ability to interchange connection methods without tools, this is the most advanced system on the market today.

AUTO UNWIND

The dual PU tubes keep the clean smooth finish that Cabrinha riders are used to, but allow for an independent chamber for the 1X Security line to pass through.

OVERDRIVE

Easy adjust Overdrive bar end with 8cm width and leader adjustment for maximum turning speed. Industry first dual density highly textured bar grip. Ergonomically designed asymmetric finger bar for intuitive and instant tactile left/right orientation. Soft touch bar ends provide a safe and stable steering platform. On-the-fly bar width adjustment and convenient line retainers.

TRIMLITE

Simple and clean trim system. Compact and durable stainless steel TrimLite Cleat™. Allows precise and positive trim adjustment. Light weight design. Elasticized trim line, internalized mainline and landing lines protected with PU tubing. Minimalist system with perfect balance and trim to match the changing wind conditions.

BIO BASED DYNEEMA

Bio-based Dyneema® fiber boasts the exact same performance as conventional Dyneema® with a carbon footprint that is 90% lower than generic HMPE fiber. As well as its extraordinary strength, bio-based Dyneema® excels in cut and abrasion resistance and has a high resistance to UV, a crucial benefit for its use in flying lines. So, whatever style you choose to ride, ride with the confidence and trust in a product that lessens your footprint, not your performance.

C.O.S. OVERDRIVE W/ TRIMLITE

SEAMLESS CONTROL

Small-Medium: 42-50cm, Medium-Large: 47-55cm

The goal in the development of the COS was to make its use so easy, that the rider can concentrate on their next jump, or wave. This is the most feature rich control system to date, but the package is so simple and intuitive to use that anyone can feel the full benefits. An all new push click Quick Release is the foundation of the COS. Matched with the ability to interchange connection methods toollessly, this is the most advanced system on the market today.

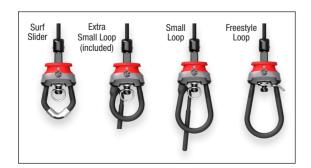

The new dual tube auto unwind feature allows you to focus on the next trick at hand without having to manually untwist your front lines. The Ceramic Bearings keep friction to an absolute minimum. Just unpin the bar, pull it in and you're ready to go.

The Dual PU Tubes keep the clean smooth finish that Cabrinha riders are used to, but allow for an independent chamber for the 1X Security line to pass through.

Our industry first dual density highly textured bar grip, provides a unmatched rider interface for unhooked, as well as hooked in riding. The ergonimcally designed asymmetric finger bar provides intuitive and instant tactile left/right orientation. Our soft touch bar ends, provides a safe and stable steering platform with on-the-fly bar width adjustment and convenient line retainers.

DESIGN PROFILE

A multi-function ergonomic adjustable control bar with Cabrinha's 1X security, COS Loop connection and Trimlite trim system.

FEATURES

- Intuitive and quick Cabrinha Operating System
- Lightweight durable stainless steel cleat
- Dual PU coated tubes providing automatic un-swivel when sheeting
- Soft-touch trim handle and line with integrated bungee
- Reduced width for precision control
- Stainless steel indexing dual chambered lightweight bar center
- Click & Go reload
- Thrust bearing auto-unswivel
- Tool-less interchangeable Click & Go connection point
- synchronized landing line, prevents the landing line from coiling
- Soft-touch overmolded trigger handle for improved grip
- compact design with reduced overall length
- Low profile dual hardness chicken finger
- 1X centralized flagging line connection point
 Low-V connection for direct steering
- Bio-based Dyneema[™] low elongation flying lines for direct and uncompromising performance
- 22m stock flying lines with 2m extensions (18m+4m+2m)
- Color coded line connection for improved safety
- Asymmetric design with superior comfort and traction for enhanced grip
- Easy adjust Overdrive bar end with 8cm width and leader adjustment
- Fully retracting bungee line retainer
- Soft, durable and ergonomic injection EVA bar ends with flex grooves

Included with bar: Extra Small Loop and Standard Leash

Product Code: K3CSODQLT

These product

WING OVERVIEW

This may just be the most exciting time for the sport of Wingsurfing. New material developments, new designs, and a rapidly growing and expanding sport are allowing us all to experience the amazing feeling, at more and more locations around the world.

In high winds the stability of the designs and careful materials implementation allows for increased range, more control and if it's your thing, jump heights never seen before in this sport.

In the lighter winds, the light wind specific sizes, as well as dedicated light wind boards have opened up the boundaries we faced before, and now allow us to get out and have fun in any location there is a breath of wind.

These, our 5th generation wing products are a true testament to the Design Works development team. Wingsurfing is a sport on its own at Cabrinha. With a dedicated designer focused only on wing products, we have been able to drive innovation and evolution forward at speed.

In any wind, in any conditions, the 04 Wing collection is your golden ticket to the best time on the water.

VISION

FREERIDE / FREESTYLE / LIGHTWIND (6 / 7 / 8)

MANTIS

ALL AROUND FREERIDE / WAVE / BIG AIR

TECHNOLOGY

NANO RIPSTOP CANOPY
The highest level of performance can only be achieved when the kite's design properties are supported by a stable and reactive kite material. Nano Ripstop provides best-in-class durability, elongation and recovery characteristics.

HIGH TENACITY DACRON

High Tenacity Dacron is specifically designed for inflated kite structures. The construction of this material is very warp oriented using ultra high tenacity yarns with an increased thread count to combat elongation under high inflation pressures. Lower elongation makes for a more accurate kite/ wing with a more efficient and accurate airfoil in flight.

SKELETAL FRAME

The use of HTD materials, and strategically placed nano ripstop transitions, provides a stable and secure skeleton to the wings. This skeleton is the key to maintaining structure under the dynamic loads that Wingsurfing provides.

COMPOSITE WIDESPAN HANDLES

Multi material composite wide span handles provide the rigidity you need for control, but with the benefit of soft to touch materials in the areas you need it. The widespan design allows for micro adjustment to fine tune the wings performance, as well as to aid in transitions and maneuvers.

PURE IMPULSE FRONT HANDLE V2

Expanding on the composite handle design, the all new Pure Impulse Front Handle gives the strongest, most direct LE control and handling in the market. Minute wrist control translates directly into wing input, allowing you to put the wing where you want it whether on a wave or going downwind.

LOAD PATH PANELS

Wingsurfing is a unique sport and it puts it's own unique forces on products. The Load Path Panel Layout has been carefully designed to help mitigate the varying loads and elongation that occur on wings. This translates into a cleaner and more structural product in a wider range of conditions.

20/20 **VISION**

The new window positioning on the Mantis and Vision wings allows for increased range of visibility not only ahead, but also behind you, to aid during riding and transitions.

SPRINT 3.0

With 15% increased airflow and a toolless interchange system, Sprint 3.0 is the most efficient way to get your kite inflated and deflated quickly, providing more time on the water. The streamlined new design reduces the chances for snagging or hose kinks when setting up and packing down. All Cabrinha 03 Wings come with 2 sprint tubes to aid in quicker inflation and deflation of the struts.

2/2.5/3/3.5/4/4.5/5/6

The gold standard in winging is back with its 4th generation design.

Crafted for those who demand the best, the Mantis V4 is the pinnacle of stability, power and feel.

With a focus being made towards power distribution and torsional control and cleanliness, the 04 Mantis marks the biggest evolutionary step for this iconic wing.

The new spanwise load path panel layout, combined with the graduated TE Load patch, make this the cleanest and highest performing Mantis to date.

DESIGN PROFILE

High rigidity LE Inflatable / Low dihedral with full powerful profile / Medium AR / Convex strut

FEATURES

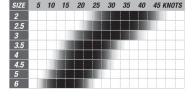

- **NEW** Convex strut for improved frame stiffness and extended TE canopy support
- NEW graduated TE load distribution panel for improved efficiency of the loaded sail
- **NEW** refined airfoil flow
- **NEW** spanwise load path panel layout
- **NEW** Fully moulded composite widespan handles with indexing mounting interface
- **NEW** Full rigid performance LE handle with anti-abrasion patch
- **NEW** 2-ply frame elbow panels for improved arc rigidity
- NEW Fine tuned size progressive wing tip twist for forgiving sheeting
- High Tenacity Dacron for enhanced dihedral stability and improved handling characteristics
- Heavy-duty UHMPWE reinforced closing seam construction
- Nano Ripstop Canopy, the benchmark in durability, stability and responsiveness
- 2-ply high rigidity center load reinforcement for added arc and dihedral stability
- Refined convex dihedral for power-to-stability ratio
- Refined airfoil center section for low end power

• Heavy-duty UHMPWE reinforced closing seam

FOIL OVERVIEW

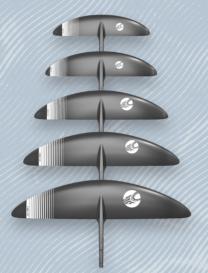

From the early pioneer days of tow foiling at Jaws, Cabrinha has been involved in each step of the foiling revolution. With the introduction of Wingsurfing, the foil has never found such a perfect match and the Cabrinha design team have worked industriously to set a new benchmark in foil design with the Cab Fusion System.

Thanks to the future proof new modular design which allows for complete customization, there are multiple options for you, no matter what kind of board you choose to ride and whatever power source you choose to get you up and flying.

TECHNOLOGY

CARBON PRE PREG

The pre-coated carbon sheets, allow for an extremely accuratelevel of resin and absorption to provide the highest quality composite construction.

AIRCRAFT GRADE ALUMINUM

Highest quality anodized 6061 aluminum provides not only strength and rigidity, but also longevity in salt water conditions.

PRECISION TAPERED CONNECTION

The ergonomic tapered connection between the fuselage and mast provides the ultimate in rigidity, while still being easy to assemble and disassemble

HELICOIL INSERTS

Helicoil inserts prevent salt water corrosion around the screw connection points.

BARREL NUT

The brass through bolt adds torsional stiffness to the wing/mast connection point, providing increased response during turns or while pumping, especially on the larger size front wings.

MODULARITY

The modularity of the CAB Fusion system allows you to seamlessly interchange between any of the X-Series and H-Series front wings and stabilizers.

PRECISION TAPERED CONNECTION

The ergonomic tapered connection between the fuselage and mast provides the ultimate in rigidity, while being easy to assemble and disassemble.

CARBON PRE PREG

Pre-coated carbon sheets allow for an extremely accurate level of resin absorption. Combined with an exclusive interweave design that follows the shape and profile of the wings, you have unparalleled levels of torsional stiffness and reflex response.

BLADDER MOLDED

Using bladder molding technology we have created a hollow mast design that has superior skin compression, allowing for the ultimate in rigidity, while also helping increase flotation.

LIGHT WEIGHT HOLLOW FUSELAGE

With the hollow design of the CNC machined aircraft-grade aluminum, we have reched an average of 25% weight reduction, while reducing the corrosion with the new polymer mounting surface.

HIGH ASPECT FOIL

H550 / H700 / H850 / H1050 / H1300

Just when you thought a product couldn't get better, the new H-Series MkII pushes into the future of foil design and sets a new benchmark for efficiency and performance. The design team have implemented new technology learnt from the collaboration with Sintef. Water testing in the biggest tank in Europe has refined the H-series tip shape to allow the tips to breach and re-enter without cavitation. This allows more progressive riding and radical turns, be it with a kite, wing or prone. The new leaner profile now boasts an increased speed range which helps entry into freestyle tricks or on the race field. It seamlessly pairs with any of Cabrinha's V-series stabs and is part of the modular Cab Fusion system.

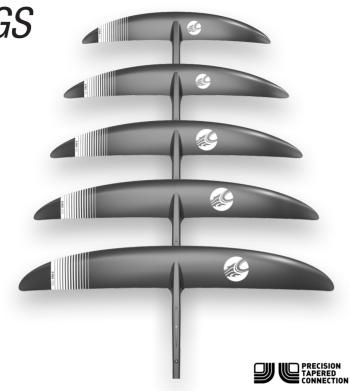

DESIGN PROFILE

High aspect ratio, swept outline, Ultra lean efficient profile, Moderate anhedral with flared tips

FEATURES

- Ultra Efficient Design
- Ultra Lean Profile
- Refined Tip Shape
- Tapered Fit
- Increased Torsional Stiffness
- High Aspect Ratio
- Barrel Nut Secure Connection
- Pre Preg Carbon Construction
- Modular Design to work with Cab Fusion Products

Product Code: K3FKWPH2V

SURF FOIL

H800 / H1000

Whether you are about high speed carving turns, tight in the pocket snaps or just drawing lines on the ocean canvas, the H Series foils design in collaboration with Keahi De Aboitiz give you the perfect tools to ride how you want on the ocean waves. The H series wings pair seamlessly with the rest of the Cab Fusion system, allowing you to optimize your ride to suit what ever your style of riding needs.

DESIGN PROFILE

Swept outline, Ultra lean efficient profile, Moderate anhedral

FEATURES

- Loose and agile feel for superior maneuverability
- Ultra lean profile for wide speed range
- Integrated fuselage with tapered fit
- Incredible torsional stiffness
- Full prepreg carbon construction
- PMI core for superior strength to weight ratio
- Moderate anhedral for a more efficient lift platform

Product Code: K3FWHFWNG

Modular

X700 / X930/ X1240 / X1650 / X2100

When we introduced the X-Series wings, we took Cabrinha's

foil program to a whole new level. Through working alongside SINTEF and the University of Norway where we were able to

fully breakdown and simulate hydrofoil performance in the

world's largest cavitation tank. From this we have been able to further evolve the X-Series into the industry's leading all

round hydrofoil. Early lift, but with a high top speed has been

achieved, and through refined tip shape and profile, you are

Swept LE, Straight TE, Ultra lean efficient profile,

able to break the tips free, but still be ready to carve into your

V180 / V200 / V230 / V285

One of the biggest effects on hydrofoil performance comes from the stabilizers. In a sport that is so diverse in its attributes and styles of riding, you need to have the right product to help you get the maximum performance from your system. Introducing the new V-Series Stabilisers. "V" represents versatility, and through the modular Fusion system, you are able to custom tailor your ride. Add a V-Series Stabilizer to any of the Cabrinha Fusion foils and get ready for the next step in performance & usability.

DESIGN PROFILE

FOILS

CARBON HOLLOW MAST

HIGH PERFORMANCE

74cm / 84cm / 94cm

The all-new Hollow Mast system is yet another example of the state of the art foil program from Cab Design Works. It nods to the critical & complete design approach of the team to view every foil component individually with a view to improve stiffness across the entire platform. It implements a bladder molded construction with strategic layering of carbon as far to the outside as possible. This culminates in our stiffest ever mast to front wing connection. This reduction in flex eliminates any lag in the turn and transfers energy while pumping seamlessly through to the front wing.

DESIGN PROFILE

Superior torsional and bend rigidity. Low weight and minimum drag

FEATURES

- Optimized airfoil for low drag to stiffness ratio
- TE scallop for improved turning and efficiency
- Integrated high modulus mounting plate
- Bladder molded, hollow mast construction for superior skin compression, providing ultimate rigidity
- Premium high modulus prepreg carbon fiber construction
- Barrel Nut compatible (X-Series MKII and H-Series MKII)
- Tapered fit

Product Code: K3FSMASTC

FUSION ALLOY FUSELAGE MKII HOLLOW

(S) 276mm / (M) 346mm / (L) 416mm

One of the smallest but most critical parts of the foil system is the Fuselage. Often overlooked, the fuselage allows you to truly custom tune your setup based not only on the conditions but also the sport you do.

The new hollow fuselage maintains the same stiffness of the previous version, but in a lightweight structure, giving you increased range and earlier take off and control.

DESIGN PROFILE

Light, stiff and durable.

FEATURES

- **NEW** Hollow fuselage for lightweight performance
- NEW Insulated mounting surfaces for Improved durability and longevity
- · Helicoils for superior durability and eliminating corrosion
- Three sizes to tune your ride

Product Code: K3FSAFUSE

FUSION ALLOY MAST

HIGH PERFORMANCE - DURABILITY

40cm / 65cm / 75cm / 85cm

The Fusion Alloy mast is constructed from extruded aircraft grade aluminum that result in an incredibly rigid & hydrodynamic structure. Helicoil inserts eliminate salt water corrosion around the screw connection points. It seamlessly integrates into all 9cm industry standard foil boxes.

DESIGN PROFILE

Swept LE, Straight TE, Ultra lean efficient profile, moderate anhedral

FEATURES

- Choice of fixed top plate or FQR (Foil Quick Release)
- 3-screw connection for superior rigidity
- Aircraft grade extruded, anodized 6061-T6 aluminum
- Precision tapered fuse-to-mast connection for optimal rigidity
- Helicoil inserts minimizes corrosion and provides long lasting durability

Product Code: **K2FSMASTA**

FUSION ALLOY TOP PLATE

One Size

The Fusion Alloy Top Plate is constructed from extruded aircraft grade aluminium that result in an incredibly rigid mast to board socket connection. It can be used with any Cab Fusion alloy mast.

DESIGN PROFILE

Durability, longevity and unmatched stiffness in an alloy setup

FEATURES

- Precision CNC machined aircraft grade, anodized 6061-T6 aluminium
- Incredible torsional stiffness

Product Code: K2FSMPLSK

FOILBOARD OVERVIEW

The foil board is more than just a platform, it's an interface. The place that translates the power of the wing to the foil. The vessel that allows you to rise up off the ocean, and maneuver through the wind with ease.

This year marks the biggest change to the foilboard range. Our new all carbon construction opens up the door to lower weights and stiff direct response. The all new tail shapes mark a step away from the old sharp cutouts, to a smoother more progressive outline that is not only hydrodynamic, but also aerodynamic.

Finally the introduction of the Swift board, brings us into a whole new era of wingfoiling. No matter what your style or foiling discipline, the 04 Cabrinha foil range will have you covered.

KITE / PUMP / TOW HYDROFOILING

3'7" x 18" x 2" - 17L 4'3" x 18.5" x 2" - 22L

Kite foiling opens up a whole new dimension to wind sports and allows riders to push boundaries of what was ever thought possible.

The all-new Logic moves on from the previous model with an all-new outline and bottom shape. The adaptive strap mounting under the front foot opens up endless opportunities for riding styles with both single or double mount options.

The all-new carbon construction allows us to reduce the weight but increase stiffness making this the best board for not only all recreational pump and tow foiling, but also in getting riders onto the podium at big air world events.

DESIGN PROFILE

Positively buoyant progressive foil board

FEATURES

- **NEW** concave deck for more positive feedback
- Refined outline for increased efficiency
- Refined rocker for a more balanced power transfer
- EPS Core, lightweight & buoyant
- Bevelled rails with hard release edge • Angle adjustable 2 or 3 strap insert configuration

As passionate wingfoilers, our screens have constantly been graced with images of people charging waves, or taking to the skies. While these images can be thought of as out of reach for most, with the right equipment anything is possible.

With a large range of sizes and through the Adaptive Strap mounting options, the barrier of entry into sinker board riding has been broken.

With an all new recessed deck, volume distribution and smoothed out tail shape, the Link helps you get up and going, but also releases back up when touching down after jumps.

DESIGN PROFILE

Efficient launch sinker board

FEATURES

- NEW Refined outline for increased efficiency
- **NEW** Recessed concave deck for more positive feedback
- **NEW** pulled in Kick tail with simplified rail flow for efficiency, earlier flight and on-foil carving clearence

Like a fine wine, things get better with time, and the evolution of the Code board is a prime example. As foils and wings develop, the Code has also been refined to suit the nuances that this incredible sport provides.

With increased volume flow across the range, the introduction of the recessed deck, the buoyancy distribution provides the perfect blend between stability and launch. The all new smooth line base profile and pulled in tail kick also aid in efficiency to help you get up to speed quickly, while also helping recover from splash downs.

The Code remains the most versatile board in the Cabrinha range, offering an incredible platform no matter what level of rider.

LIGHTWIND WING FOILING

5'8 x 19" x 5.4 - 85L / 6'3 x 20" x 5.4 - 100L 6'9 x 21 x 6.1 - 125L

There have been many noticeable innovations in the sport of wingfoiling. The first inflatable wing, high aspect foils, composite wide span handles. But this is the next big evolution.

Introducing the Swift. A displacement hull design, with wingfoil specific volume distribution and sizing. The first board of it's kind to be specifically designed to not only aid in light wind wingfoiling, but to also become a go to board in any quiver for all styles of riding in both flat water and waves.

The unique hull shape and volume distribution works in harmony with the power of the wing to generate enough forward momentum to get you up and foiling effortlessly. Combined with the high cut rails, this makes the Swift not only the best light wind board on the market, it may also be one of the best wave riding boards out there.

Give the Swift a go, and feel it change not only how you ride, but what is possible.

DESIGN PROFILE

PRONE FOILING

4'8" x 18.2" x 3.2" - 34.7L 5'0" x 20" x 3" - 40.5L

Prone foiling has been around since the onset of people riding modern day hydrofoils. In it's inception the challenge to get up and riding was so high, as we just didn't know how to do it, or how to foil. The foiling barrier has been broken down now, and with the right equipment and the right board, the world of prone foiling is open to everyone.

With two distinct shapes the Bump range covers everyone from pure beginner to seasoned pro.

Grab a board, pair it with your favorite foil and open the doors to a whole other way to maximize your water time.

DESIGN PROFILE

Round pin / Nose-entry-V to planing surface / Fast rocker / High rail-chine / Concave deck

FEATURES

- Efficient outline for increased efficiency
- Nose-entry-V into planing surface for efficient glide and take-off
- Pulled in Kick tail with high-chine rail flow for efficiency, earlier flight and on-foil carving clearence
- Refined rocker for a more balanced power transfer
- Recessed concave deck for more positive feedback
- Small size: for high performance surfing and maximum maneuverability
- Large size: easy paddling, take-off and forgiving touchdowns, for all conditions
- Industry standard 9cm adjustable foil mount with position indicators
- Full custom high-grip EVA deck pad
- PVC reinforced deck
- Double pvc/glass stringers
- Carbon hybrid construction reactive, lightweight
- EPS Core, Light Weight & Buoyant
- Reusable Flexi-hex packaging

Included with the board: 4pcs m8x30mm mounting bolts 2pcs Lockable T-nut assembly (NOTE: straps sold separately)

SPECIAL AGENT

HYDROFOILING

105cm x 39.5cm / 125cm x 42.5cm

The reworked new Special Agent builds off the exceptionally popular Special Agent foilboard platform. Its new pulled in low drag nose design and increased rocker improves recovery and launch getting you up and riding in a flash while smooths any piloting errors.

Its exceptional versatility makes it the perfect all-around foil board that beginners can improve quickly on while advanced riders can dial in advanced tack and gybe maneouvers. The carbon & fiberglass construction is locked in by two geometric stringers designed for insane stiffness from tip to tail. A completely covered Dakine deck pad gives the ultimate traction and grip.

DESIGN PROFILE

Foil specific board with a minimalist approach with stiffness induced by shaping and construction

FEATURES

- Low drag outline
- Increased rocker for improved recovery and launch
- Increased stiffness through new laminated woodcore
- Full EVA deck pad with kick improved grip
- UD carbon and fibreglass construction
- Geometric stringer adds high degree of stiffness for better responsiveness
- Easy to use and progress
- Beveled rails for forgiving touch down
- Strapless, 2 or 3 strap configuration, allows for a fully customizable ride
- Foil tracks with integrated T-nuts compatible with both industry standard hole pattern • Industry standard 9cm adjustable foil mount with
- position indicators

Included with the board: 4pcs m8x20mm, m8 Tnuts, full deck pad (NOTE: straps sold separately)

Product Code: K3FBSPECL

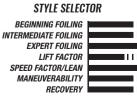

Product Codes: (4'8") K4FBBUMPW-408XXX (5'0") K4FBBUMPW-500XXX

SURFBOARD OVERVIEW

There is something amazing about a surfboard. The feeling of power transferring between you and the ocean, whether you're riding liquid mountains or just cruising around, it is like nothing else. The holy grail has always been for a lightweight, durable but flexible board. The Design Works team have been working hard on an all new technology to bring this feeling we all desire.

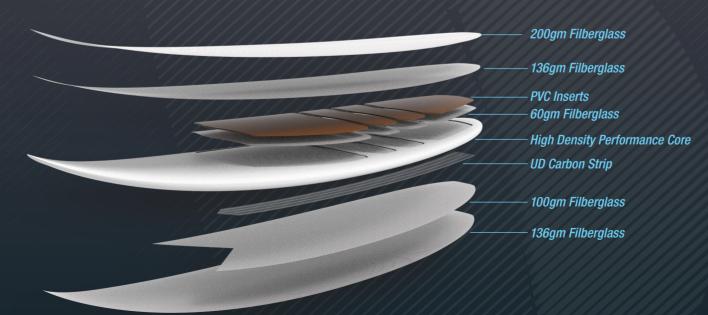

Introducing IsoFlex technology. Inspired by nature from the oceanic Isopoda family, strategically placed materials, fused within a lightweight fiberglass sandwich construction, allow the board to flex during riding and turns, but still remain durable for the rigors that kiting imposes.

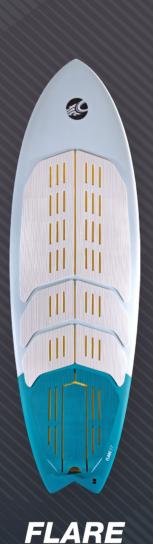

No kiteboards in the industry will give you this level of performance and durability. Whether carving on a wave, or loading for a strapless trick, this is the construction that will get you to the next level.

TECHNOLOGY

ISO FLEX CONSTRUCTION

Inspired by nature from the oceanic Isopoda family, strategically placed materials, fused within a lightweight fiberglass sandwich construction, allow the board to flex during riding and turns, but still remain durable for the rigors that kiting imposes.

PHANTOMDOWN THE LINE POWER SURFING

ALL AROUND SURF

5'1" x 18.5" x 2" - 20.5L 5'4" x 19" x 2" - 22L

Maybe the most fun board you have ever ridden, the Flare will light up any session. The wide point forward on the board helps get you up and going and keeps things fun and fresh whether riding waves or taking to the air. The fish tail and quad fin set up give you the forward drive you need to get from section to section, but still be loose and fun when turning off the top.

The Flare turns every wave into a playground, and changes the way you look at the ocean.

DESIGN PROFILE

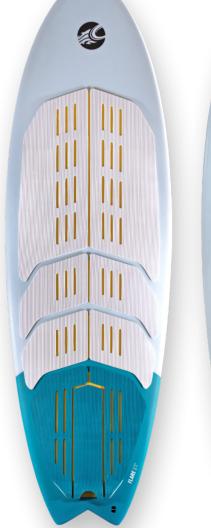

Wide point forward, Moderate rocker, Thin rails, Fish tail and five fin setup.

FEATURES

- **NEW** IsoFlex Lightweight fiberglass sandwich construction with PVC deck reinforcement.
- **NEW** CNC machined High density EPS core for a precise shape and superior flex characteristics
- **NEW** Thinned out rail flow with smooth tuck-line transition for improved carving and control
- **NEW** Single concave bottom for a predictable and forgiving ride
- NEW Wide point forward and straight tail, for efficient control and drive
- **NEW** Moderate rocker line for all round performance

Included with the board: Modular EVA pad and 3 molded fins

Product Code: K3SBFLARE

PHANTOM

DOWN THE LINE POWER SURFING

5'6" x 18.5" x 2.1"- 23L 5'9" x 19.1" x 2.2"- 25.5L

Speed, Power, Flow. Three words that have become synonymous with wave riding over the years. A very rare few are born with a natural ability to make this happen with ease. Others need to make sure they are on the correct craft to really exploit the oceanic mountains they choose to ride.

The Phantom is the next generation of high performance kite surf boards. Specifically designed for the forces of kiting, the Phantom really comes into its own in real surf conditions. The curvy outline and rounded pin tail give you the confidence required to lean into that bottom turn, or carve off the lip. The IsoFlex construction also allows for increased grip and drive during those critical turns. With either a thruster or quad setup, you can choose your style of riding between full power carves, or critical vertical hits.

DESIGN PROFILE

Round pin tail, Lean and curved outline, Progressive rocker and 5 fin setup

FEATURES

- **NEW** IsoFlex Lightweight fiberglass sandwich construction with PVC deck reinforcement.
- NEW CNC machined High density EPS core for a precise shape and superior flex characteristics
- **NEW** Thinned out rail flow with smooth tuck-line transition for improved carving and control
- **NEW** Deep single concave for ultimate grip and control
- **NEW** Round pin, wide point centered for a well balanced board that promotes control in top to bottom surfing
- **NEW** Progressive rocker line for ultimate drive and turning in critical sections

CONSTRUCTION

HYBRID CORE

Honeycomb foam/paulownia hybrid construction resulting in an optimized strength to weight ratio.

PAULOWNIA WOOD CORE

We use a premium "A-grade" Paulownia wood core which is vertically laminated to optimize strength, reduce weight and allow the board to flex more naturally and freely.

CARBON

Customized double 45 degree bias Carbon Fiber is a lightweight and durable laminate that maximizes performance by stiffening the flex pattern for increased response and explosive pop.

VOLCANIC BASALT

Basalt is a volcanic mineral fiber which offers vibration resistance and durability while maintaining a high strength to weight ratio. Washed pure molten basalt rock is absent of toxic additives. The combination of wood core with basalt laminate provides a flex characteristic, unique to Cabrinha.

PARABOLIC RAILS

Core profiling is the most efficient way to control tip, tail and torsional flex. Tapered raised rails control the torsional stiffness and enhances flex control while keeping the board weight to a minimum. Freeride boards benefit the most from the technology with a substantial increase in rebound.

ABS

ABS is a tough hard wearing composite material which bonds very well to epoxy. This is used during the lay-up process ensuring a smooth, durable and consistent ride. All twin tip rails and insert blocks are made from ABS material.

GRIND BASE

Compression formed for enhanced slide and durability on obstacles. Found exclusively on the CBL.

ROCKERS

All of our twin tips have an overall rocker (bottom curve from tip to tip) of between 25mm and 50mm.

Provides razor sharp responsiveness and stability for landings. Designed to get you up and riding quickly and upwind fast. Found on the Xcal Carbon and Xcal Wood.

The highest rocker line in our range for the ultimate performance. Found on the CBL.

Medium rocker boards find the perfect balance between high rocker high performance and flat light wind rockers making the boards great all around boards with lengthened turning radius. Found on the Ace Wood, XO and Spectrum.

Gets you up on a plane with the least amount of power possible. Found on the Stylus.

FLEX

Flex allows the rocker of the board to change in response to different riding conditions.

For those who ride fast and want the board to react quickly. A stiff flex pattern ensures a powerful energy transfer so the board will pop off the water, and maintain control at fast speeds. Found on the Ace Carbon, Xcal Carbon, CBL and Stylus.

For riders that like to have fun doing a little of everything will want a moderate or medium flex that allows for easier landings, buttery turns, and more forgiveness in all kinds of conditions. Found on the Ace Wood and Xcal wood.

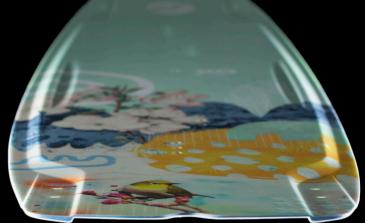

Provides a smooth and stable ride by reducing chatter and increa- sing the ease of initiating and linking turns. Found on the Spectrum.

Precision engineered for lighter riders to provide a better feel and offer more control. Found exclusively on the XO.

XCAL CARBON

COMPETITION FREESTYLE

135 x 41 / 138 x 42 / 141 x 43

The XCAL Carbon is the most responsively tuned board in the Cabrinha range leading to exceptional freestyle performance. The most important stage of any trick is the take off and it's here where the specific use of Japanese Toray carbon construction and the aggressive quad tip channels produce explosive & predictable pop.

High speed landings are absorbed with ease through the centre double concave shape. When sheer performance is all that matters the XCAL carbon is your go to stealthy performer.

DESIGN PROFILE

High performance freestyle model with structural carbon and incredible reflex.

FEATURES

- Aggressive quad tip channels for backfoot grip and improved pop
- Rail channels for maximum edge control
- Double concave in center for smooth and controllable landings
- High end construction for performance and speed in all conditions
- Exclusive use of Japaneese Toray structural carbon
- Stiff flex pattern for a rapid response & explosive pop
- Excellent upwind drive

Included with the board: 4x 40mm fins, 4x washers, 10x m6x16mm screws, grab handle

Product Code: K3TTXCLCB

BIG AIR

ALL AROUND FREESTYLE / BIG AIR

133 x 40 / 135 x 41 / 138 x 42 / 141 x 43

The XCAL Wood is packed full of performance enhancing features to get you up to speed in a flash and it's here where it excels giving the rider a completely locked in and controlled ride. What you do in this moment is in your hands, whether you release into the stratosphere or load the rail into a powered takeoff. High speed landings are absorbed with ease through the centre double concave shape.

DESIGN PROFILE

A Paulownia wood design with a dampened ride.

FEATURES

- Aggressive quad tip channels for backfoot grip and improved pop
- Rail channels for maximum edge control
- Double concave in center for smooth and controllable landings
- Tough, lightweight & responsive
- Predictable pop & low spin weight
- Early planing lift & reliable edge hold
- Excellent upwind drive

Included with the board: 4x 40mm fins, 4x washers, 10x m6x16mm screws, grab handle

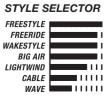

Product Code: K3TTXCLWD

CABRINHA

The all new 03 Ace is the culmination of three years of design work from the Cab Design Works team. It's been stripped back and rebuilt with a completely new outline and bottom contouring.

To say this board is lively is an understatement. The 'hybrid' mix of ingredients ranging from its dual Carbon stringers, honeycomb foam & paulownia mix core optimises strength to weight ratio. What makes this method of board design so appealing is its versatility and ease at which it performs across riding genres.

Modern day kiteboarding is about freeriding, be that boosting huge airs, slashing waves, powered tricks and the Ace Hybrid seamlessly transitions the freeride spectrum making it highest performing 'Do it all' board in the range.

DESIGN PROFILE

High performance board with structural carbon and lightweight composite core that stiffens the flex pattern for increased response and explosive pop.

FEATURES

- Double center concave
- 4 degree angled fin for improved grip
- Refined volume flow for improved dynamics
- Centered deck grab rails for progressive board-off maneuvers
- Quad channels in the tips for grip when loading off back foot
- Medium rocker line for early planing lift and reliable edge hold
 Moderate/low flex pattern for a rapid response & intuitive pop
- High-end hybrid core construction for lively performance in all conditions
- Exclusive and strategic use of Japanese Toray UD carbon for precision feedback

Included with the board:

4x 40mm fins, 4x washers, 10xm6x16mm screws, grab handle

Product Code: K3TTACEHD

ACE

The all new 03 Ace is the culmination of three years of design work from the Cab Design Works team. It's been stripped back and rebuilt with a completely new outline and bottom contouring.

The Ace's vertically laminated paulownia wood reduces weight and allows a true flex giving you complete confidence to try anything. Whatever conditions the day throws your way the Ace's versatility will lead to progression in all areas of your riding.

DESIGN PROFILE

High performance model with the dampening of Paulownia wood.

FEATURES

- Double center concave
- 4 degree angled fin for improved grip
- Refined volume flow for improved dynamics
- Centered deck grab rails for progressive board-off maneuvers
- Quad channels in the tips for grip when loading off back foot
- Medium rocker line for early planing lift and reliable edge hold
- Moderate/low flex pattern for a rapid response & intuitive pop

Included with the board:

4x 40mm fins, 4x washers, 10xm6x16mm screws, grab handle

Product Code: K3TTACEWD

ACE

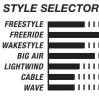

XO

FREESTYLE / FREERIDE

133 x 38.5 / 136 x 39.5

The XO is a high performance freestyle / freeride model that is optimized for lighter weights and generally smaller riders.

The flex pattern is softer for a smoother ride and the stance widths are slightly narrower than the rest of our range.

The XO is built on the design platform of our popular ACE model to give it a wide range of performance opportunities.

DESIGN PROFILE

High performance women's model with the dampening of Paulownia wood.

FEATURES

- Tough and lightweight construction
- Suitably sized for women
- Dynamic pop & low spin weight
- Early planing lift & reliable edge holdMaximum upwind drive
- Quad channels in the tips for grip when loading off the back foot
- Rail channels for grip

Included with the board:

4x 40mm fins, 4x washers, 10xm6x16mm screws, grab handle

Product Code: K3TTXOXOX

SPECTRUM

ALL AROUND FREERIDE

133 x 40 / 136 x 41 / 140 x 42 144 x 43 / 148 x 44 / 152 x 44

It's all about predictable performance designed for progression at an incredible pace. The Spectrum is "Mr. Reliable" and is feature rich at a mighty impressive price tag.

Progression is all about repetition and with the Spectrum's excellent upwind tracking you can maximize your time on the water. The incredibly forgiving feel makes the Spectrum the easiest board in the range to ride and with a multitude of sizes you can make sure your focus never leaves your kite.

DESIGN PROFILE

A fast and forgiving outline with a medium amount of rocker.

FEATURES

- Rocker and flex is designed for the widest range of conditions and riding styles
- Excellent upwind tracking
- Soft landings
- Excels in choppy water
- Smooth and predictable board control
- Single concave bottom
- Large fins for grip

Included with the board:

4x 50mm fins, 4x washers, 10xm6x16mm screws, grab handle

Product Code: K3TTSPCTM

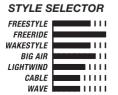

RAIL

STYLE SELECTOR

_

CABRINHA

CBL

WAKESTYLE / CABLE

139 x 42 / 142 x 43

Style and steez are qualities that usually take years to perfect.

Enter the CBL, a crossover kite / wake board that utilizes a bomber P-Tex grind base with specific engineered reinforcements dedicated to aid in your progression to perfection and allowing you to session with or without wind.

Its stiff flex and wood core is designed to ride fast and create insane levels of pop and slack. This extra time in the air allows you the ability to add grabs or extra rotations. Its ample rocker line dispels water on impact, cushioning landings with a stomp! Its moderate rail and tip shape allow for grip without impeding presses on sliders and features.

DESIGN PROFILE

Bottom shape and construction suited for wake style and cable. Also excellent for choppy water.

FEATURES

- Fluid power transfer from any source
- Excellent wakestyle performance
- P-tex grind base bottom sheet
- Engineered reinforcements and strategic use of carbon for directed flex control
- Tip channels for finless tracking & smooth release
- Flat center for hitting any type of obstacle
- High rocker for cable and wakestyle
- Rail and tip channels provides grip

Included with the board:

4x 20mm fins, 4x washers, 8x m6x16mm screws

Product Code: K3TTCBLWK

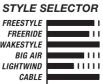

BRINH

STYLUS

LIGHTWIND / FREERIDE

150 x 45 / 160 x 47.5

The Stylus has redefined kiteboarding in lighter winds. What is really impressive though is its top end performance.

While care has been made for optimal efficiency for light wind planing and control its stiff flex, lightweight paulownia core allows you to still take to the air and take advantage of less than perfect wind conditions.

The Stylus is no light wind 'door' and you'll be thankful of its feature rich design long after the wind picks up. Its lightwind rocker will get you planing while others are still watching from the beach deliberating.

DESIGN PROFILE

Low rocker, high speed design. Optimized for light wind planing.

FEATURES

- Excellent performance in light wind conditions
- Versatility beneath your feet
- Excellent upwind ability
- Offset binding inserts to the heel edge
- Asymmetrical stance for better grip, control and lightwind planing
- Rail channels for grip
- UD basalt to support light-wind low rocker line for early planing

Included with the board:

4x 50mm fins, 4x washers, 10xm6x16mm screws, grab handle

Product Code: KK3TTSTYLS

50mm fins and grab handle

BINDINGS

SOURCE

ALL AROUND PERFORMANCE BINDING

Small < 8 US / < 42 EURO Medium 7-11 US / 40-45 EURO Large > 10 US / > 45-47 EURO

The Source binding has been engineered from the ground up to give riders the ultimate connection to their board. At the heart of every rider's kitesurf experience, the Source puts comfort, control and performance into one ergonomically snug-fitting system. From first water starts through to megaloop board-offs, the Source gives you the confidence to forget what your feet are doing and concentrate on the rest. Three uniquely sized options combined with the innovative new 360° wrap around strap allows fast customization and the perfect fit for all shapes and sizes.

DESIGN PROFILE

Lightweight, 3-point foot strap connection

FEATURES

- Dual density pad provides the perfect balance between grip and comfort
- Triple position duck adjustment for a personalized stance • Angled micro-width adjustment for a snug fit, in either bare
- feet or booties • Pre-shaped adjustable 360° wrap around strap
- Industry standard 6"mounting pattern
- Available in three sizes for the perfect fit
- Includes: 2x straps, 4x wings, 2x pads, 4x screws

Product Code: K2BASOURC

WAKESTYLE / CABLE BOOT

Small < 9 US / < 41 EURO Medium 8.5 - 10.5 US / 42-44 EURO Large 11.5-13 US / 45-47 EURO

The H3 is a fully adjustable boot designed for the unique forces of kiteboarding. Unlike a traditional wakeboard boot, a kiteboard boot spends long periods of time on it's heel side edge. This puts your ankle in a slightly different position and the H3 is designed to accommodate that

The ultra lightweight outer shell and low profile upper section are designed for more lateral movement, without sacrificing support. Other features include easy velcro entry and exit, neoprene flex zones for flexibility, closed toe design to reduce cramping and improve fit, and lightweight nylon, baseless chassis to give you a solid board feel with maximum impact absorption.

DESIGN PROFILE

Closed toe design, Low-cut, Flex chassis, Flex boot, Velcro closure.

- Three guick adjusting velcro straps for one handed entry / exit
- Flexible chassis to conform to the rocker of the board
- · Low-cut, closed toe design
- Lightweight PU shell
- Supportive PU upper
- Removable / replaceable velcro straps (not sold as spare parts)
- Neoprene flex zone
- Dual durometer base (soft boot + harder baseplate insert)
- Widened baseplate toe area for better feel and control • Reduced baseplate contact points for better impact absorption
- Includes: Stainless steel mounting hardware 2x boots, 4x screws

Product Code: K9BAH3XXX

ULTRALIGHT STRAPS

SURF / FOIL BOARDING

STANDARD (One-size-fits-all)

The Ultralight strap is a minimal coverage strap that provides maximum board connection. The comfortable and very lightweight footstrap is perfect for surfing, foiling and racing, keeping you locked in with a direct feel. The Ultralight strap gives you that perfect fit and foot placement stability when

DESIGN PROFILE

Symmetric entry, contoured outline, dual density

FEATURES

- Ultra lightweight construction
- Maximum comfort
- Minimal water absorption
- Molded dual density foam prevents collapsing
- Stainless steel mounting hardware included

Product Codes:

Foil - K1BAULSTS003 (3x straps, 6x washers, 6 screws) Surf - K1BAULSTS002 (2x straps, 4x washer sets, 4 screws)

Removable EVA ear protectors

CAB HELMET

XSmall 51-53cm / Small 54-56cm / Medium 56-58cm Large 58-60cm / XLarge 59-62cm

The Cab Helmet is the ultimate in lightweight protection and style. Its non-water absorbing construction and air-vent system helps to wick away moisture while keeping you cool. Removable ear protectors give you a complete range of protection while the easy-adjust chin strap allows for a quick and simple fit. The Cab Helmet is fully certified for Watersports use to CE EN 1385 to make certain of a safe and comfortable ride.

FEATURES

- CE approved EN 1385
- Ultra light non-water absorbent construction
- Impact resistant ABS outer shell • Impact absorption soft EVA lining
- Air-vent system
- Easy-adjust chin straps
- Twist tightening system
- Removable EVA ear protectors

Product Code: K1KALDHMT
